Smarter Document Control. Seamless Collaboration.

Wrench SmartProject EDMS simplifies collaboration across project stakeholders – including clients, vendors, and consultants – by enabling the secure exchange of 3D/BIM models, drawings, documents, digital forms, and correspondences through automated, predefined workflows.

With SmartProject, users can easily create or import a Master Deliverable List (MDL) from other planning tools, define Rules of Credit for accurate progress tracking, and integrate project schedules for real-time monitoring of timelines and deliverables.

Its automated workflows and real-time updates reduce manual errors and eliminate process bottlenecks, enabling faster decision-making and unbiased reporting. Built-in to-do lists, alerts, and reminders keep teams aligned and projects on track.

As a cloud-based, mobile-friendly solution, Wrench SmartProject EDMS

ensures complete traceability with a secure audit trail for every action – so that every task is documented, monitored, and completed as committed.

Wrench SmartProject EDMS empowers engineering teams with complete control over project documents, ensuring seamless collaboration between stakeholders at every stage of the project lifecycle.

Powered by **Wrench AI Advisor (WAA)** – an intelligent feature within SmartProject – the system proactively identifies bottlenecks, flags potential risks, and alerts users to issues that could impact project timelines.

From creation to completion, Wrench SmartProject EDMS helps manage the entire lifecycle of engineering documents on a single integrated platform – driving efficiency, accuracy, and on-time delivery.

Smarter document management. Real-time visibility. On-time project delivery

The features provided by Wrench SmartProject includes

Online collaboration over documents/drawings/models

Realtime Progress Monitoring

Automated Workflows with Distribution Matrix

Revision Management & Control

Audit trails

Reports and Dashboards

Wrench SmartProject Implementation Approach

Structured. Flexible. User-Friendly

At Wrench Solutions, our implementation approach for SmartProject EDMS is designed to help organizations quickly realize value by aligning industry best practices with their existing processes.

We follow a structured, phased approach that ensures a smooth transition and faster user adoption while minimizing disruption to ongoing operations.

Our Implementation Stages:

- Requirement Gathering
- System Configuration & Customization
- User Training (Admin, End Users, Basic Users)
- Pilot Run & Acceptance Testing
- Final Go-Live & Handover

Throughout the implementation journey, our experienced team provides flexible deployment options, ensuring resources are available as and when required by the client.

To drive user adoption and maximize system utilization, we offer role-based training programs delivered by certified trainers – ensuring every user, from beginners to administrators, is fully equipped to leverage the platform effectively.

SmartProject is a subscription-based cloud solution that can be configured to meet specific customer requirements within 4 weeks.

**Our
Goal**

A seamless implementation experience with continuous support every step of the way

Seamless Integration

Wrench SmartProject easily integrates with leading enterprise software like MS Project, Primavera, SAP, Aconex, and more – enabling smooth data exchange across platforms through readily available APIs.

This flexibility ensures that your existing tools and systems work in perfect sync with SmartProject, creating a unified project environment without disrupting your current workflows.

Connect. Integrate. Collaborate Better

Support

Reliable Assistance. Anytime, Anywhere

Wrench SmartProject offers comprehensive post-Go-Live support to ensure your system runs smoothly and your teams stay productive.

Our dedicated support services include both onsite and remote assistance, delivered through multiple channels – telephone helpdesk, remote desktop access, and online chat – ensuring quick resolution of issues, regardless of location.

Enhancing this experience is 'Work as One', our AI-enabled support system, designed to minimize turnaround times and empower users with faster, smarter assistance.

With Wrench SmartProject, help is always just a click or call away

Benefits

Here are some benefits of using Wrench SmartProject as a CDE for EPC projects:

Improved Collaboration and Communication:

With all project information centralized, project teams can easily access and share data, reducing errors and misunderstandings.

Increased Efficiency and Productivity:

SmartProject serves as a single source of truth for project information, minimizing the need for manual processes and saving time on data entry and verification.

Enhanced Decision Making:

BIM models provide rich data for analysis and simulation, enabling stakeholders to make informed decisions and identify potential issues before they arise.

Improved Quality:

SmartProject streamlines processes with built-in workflows and protocols, ensuring participants follow prescribed procedures. This automation reduces human error, lowers manpower costs, and minimizes redundancy and rework.

Audit Trail:

Capture all work transactions as they occur, providing a complete history and context. This ensures that any conflicts or misunderstandings can be resolved quickly with all relevant data at hand, maintaining a fully trackable system.

“Wrench has brought a dramatic change in our Engineering Culture.”

Ranjit Ghosh,
G.M & Head – EDRC, L&T MMH

“We started managing all our vendors from inside the Wrench SmartProject system and is automatically expediting their deliverables, this helps us save a lot of time.”

Vishnu Patel , Head Engineering – AM/NS India.

“We already had SAP, CAD, email, etc., but EPC is such a competitive sector that we thought we should invest in something that can give us an extra advantage, WRENCH gave us that advantage”.

Shailendra Ostwal, IT Head,
Galfar Almisnad Engineering

“With WRENCH SmartProject, I have total control of ALL my engineering deliverables even the ones that are handled by multiple people, across different groups and locations.”

C. Shelley, Manager, Planning –
Vatech Wabag Ltd
