

Wrench vs ERP + DMS

Overview

Feature / Capability	Wrench-SmartProject	ERP + DMS (Separate Systems)
Core Purpose	Project-centric execution platform	Financial + operational management (ERP) + document management (DMS)
Built For	Project lifecycle workflows (EPC, construction)	Corporate enterprise management
Implementation Scope	Focused on projects & collaboration	Broad enterprise functions beyond projects
Integration	Native workflows with fewer modules	Requires integration & customization
Data Structure	Project-centric dataset	Functional departmental datasets
Reporting	Project KPI dashboards	Financial & compliance reports primarily
Best For	Project execution teams	Enterprises seeking end-to-end business operations
Complexity	Lower (project focus)	Higher (enterprise focus)

Integration Scenarios

Wrench ↔ ERP

- Project cost and commitment data sync into ERP
- ERP financials roll up at enterprise level

Wrench ↔ DMS

- Documents flow from project context into compliance repository
- Version sync & audit trail maintained

Tools that help connect systems

- API / Middleware platforms (Mulesoft, Zapier, Boomi)
- Custom connectors

Which Should You Pick?

Choose Wrench-SmartProject

- ✓ You want tight project workflows
- ✓ Your priority is field execution visibility
- ✓ You want simpler adoption for project teams
- ✓ You want native document ↔ project context

Choose ERP + DMS

- ✓ You need enterprise financial management
- ✓ Your org requires standardized corporate processes
- ✓ Multi-division revenue consolidation
- ✓ Governance, risk, compliance at scale
